

NIGHT VISION

nvg compatible flashlights

Features

- Available in NVIS/NVG green A or white
- Meets MIL-L-85762A and RAE Working Paper number 6
- 1.0mm (0.040") thick monolithic coated glass filters in flashlights
- 2.0mm (0.080") thick monolithic coated glass for safety light adapter

Benefits

- Controlled red transmission for map reading
- Maintains full compatibility with night vision goggles

Oxley has developed a unique range of filters and rugged components, suitable for the NVG compatible conversion of most hand held flashlights and safety lights. We can supply a range of modified Maglite and other aircrew lights. Alternatively, we can provide filters cut to appropriate sizes for simple, rapid and cost-effective modification. It is possible to revert to the original lens, if required. As an aid to map reading in night flying operations and for general use in the cockpit, the Oxley NVG compatible flashlights are an effective solution.
